

CS 021: Introduction to Computer Science II

Term: 2020 Winter Session Instructor: Staff Language of Instruction: English Classroom: TBA Office Hours: TBA Class Sessions Per Week: 6 Total Weeks: 4 Total Class Sessions: 25 Class Session Length (minutes): 145 Credit Hours: 4

Course Description:

This course will enable students use computers to solve problems. The following topics will include in this course: Introduction to Computers and C++ Programming, C++ Basics, and Flow of Control, Functions, I/O Streams as an Introduction to Objects and Classes, Arrays, Strings and Vectors, Pointers and Dynamic Arrays, Defining Classes, Linked Lists. This course will also talk about dynamic memory allocation and memory management.

Learning Objectives:

Upon completion of this course, students will be able to:

- Gain experience solving problems with computers;
- Understand arrays by designing and implementing programs that search and sort arrays;
- Understand pointers and dynamic memory allocation by designing and implementing programs using pointers and dynamic memory allocation;
- Understand differences between C and C++ in the areas of strings, pass by reference/passing pointers, and structs by designing and implementing programs that use C strings, C++ strings, C language structs and classes;
- Master dynamic memory allocation and memory management.

Course Materials:

Walter Savitch. Problem Solving with C++, 10th Edition, Prentice Hall, 2018.

Course Format and Requirements:

The course will take place in a computer lab and the course format including lecture, programming project, and in-class discussion.

The specific topics that will be covered in the classes are listed in the course syllabus. The class period will consist of an active learning environment. During a majority of the class time, students will be actively working on problems under the instructor's guides.

Attendance:

Attendance will not be taken but is strongly recommended. Each student will have three allowed absences and no grade deduction will be made for the first three absences. More than three unexcused absences will result in an automatic reduction in your participation grade, for instance from A- to B+. Your active participation in the class is expected and encouraged.

Grading Scale:

A+: 98%-100% A: 93%-97% A-: 90%-92% B+: 88%-89% B: 83%-87% B-: 80%-82% C+: 78%-79% C: 73%-77% C: 70%-72% D+: 68%-69% D: 63%-67% D-: 60%-62% F: Below 60%

Course Assignments:

Quizzes:

There will be 5 quizzes this semester, given during the discussion sections. Each quiz will be on the material covered that week. There will be NO make-ups for quizzes for any reason. All of the quizzes will be closed book.

Midterm Exam:

The in-class, close-book and non-cumulative midterm exam will be given through this course. The midterm exam will be based on the knowledge covered in class. No excuse will be accepted if students do not have legitimate excuses for absence. Physician Statement is required for missing the exam due.

Weekly Projects:

There will be four hands-on projects based on course need. It will count for 40% of your grade for the course. The projects will enrich students' knowledge on writing large programs. The score will be given based on the correctness of the program.

Final Exam:

The final will be in-class, cumulative and close-book. The final exams will be based on concepts covered in class. Note that the final will not be taken during the normal class times. Exact time and location for final will be announced later.

Course Assessment:

Quizzes	10%
Weekly Projects	40%
Midterm Exam	20%
Final Exam	30%
Total	100%

Academic Integrity:

Students are encouraged to study together, and to discuss lecture topics with one another, but all other work should be completed independently.

Students are expected to adhere to the standards of academic honesty and integrity that are described in the Shanghai Normal University's *Academic Conduct Code*. Any work suspected of violating the standards of the *Academic Conduct Code* will be reported to the Dean's Office. Penalties for violating the *Academic Conduct Code* may include dismissal from the program. All

students have an individual responsibility to know and understand the provisions of the *Academic Conduct Code*.

Special Needs or Assistance:

Please contact the Administrative Office immediately if you have a learning disability, a medical issue, or any other type of problem that prevents professors from seeing you have learned the course material. Our goal is to help you learn, not to penalize you for issues which mask your learning.

Course Schedule:

Week	Topics	Activities
	• Go through syllabus and introduction to the cours	rse • Quiz 1
	• Introduction to computers and C++ programming	• Quiz 2
	Computer systems	Weekly project
	Programming and problem-solving	
	Introduction to C++	
	Testing and debugging	
	• C++ Basics	
1	Variables and assignments	
	Input and output	
	Data types and expressions	
	Simple flow of control	
	 More flow of control 	
	 Using Boolean expressions 	
	 Multiway branches 	
	More about C++ loop statements	
	Designing loops	
	Procedural abstraction and functions that return	a Quiz 3
	value	Weekly project
	Top-down design	Midterm exam
2	Predefined functions	
	 Programmer-defined functions 	
	 Procedural abstraction 	
	Scope and local variables	

	 Overloading function names 	
	• Functions for all subtasks	
	Void functions	
	Call by reference parameters	
	Using procedural abstraction	
	Testing and debugging functions	
	 General debugging techniques 	
	• I/O streams as an introduction to objects and	• Quiz 4
	classes	• Quiz 5
	Streams and basic file I/0	 Weekly project
	Tools for stream I/0	
	➢ Character I/0	
	• Arrays	
	Introduction to arrays	
3	Arrays in functions	
	Programming with arrays	
	 Multidimensional arrays 	
	Strings and vectors	
	An array type for strings	
	The standard string class	
	> Vectors	
	Dynamic memory allocation	
	Memory management	• Quiz 6
	Pointers and dynamic arrays	Weekly project
	> Pointers	Final Exam
	 Dynamic arrays 	
4	 Introduction to Defining Classes 	
	> Structures	
	➤ classes	
	Introduction to Linked Lists
